

DialogCardConfig::on
_btn_Init_clicked

DialogCardConfig::on
_btn_MemData_clicked

DialogCardConfig::authentication

```
graph LR; A[DialogCardConfig::on _btn_Init_clicked] --> C[DialogCardConfig::authentication]; B[DialogCardConfig::on _btn_MemData_clicked] --> C;
```

The diagram illustrates a flow where two separate event handler functions, 'DialogCardConfig::on _btn_Init_clicked' and 'DialogCardConfig::on _btn_MemData_clicked', both trigger the 'DialogCardConfig::authentication' process. The event handler boxes are white with black borders, while the authentication box is gray with a black border. Blue arrows indicate the direction of the flow from the event handlers to the authentication process.
