

DialogCardConfig::on
_btn_Init_clicked

DialogCardConfig::on
_btn_MemData_clicked

DialogCardConfig::authentication

```
graph LR; A[DialogCardConfig::on _btn_Init_clicked] --> C[DialogCardConfig::authentication]; B[DialogCardConfig::on _btn_MemData_clicked] --> C;
```

The diagram illustrates a software architecture where two distinct event handlers, `DialogCardConfig::on _btn_Init_clicked` and `DialogCardConfig::on _btn_MemData_clicked`, are connected to a common function, `DialogCardConfig::authentication`. The function box is shaded gray, while the event handler boxes are white. Blue arrows indicate the flow of control from the event handlers to the authentication function.
